11. Deploying a Zoho Creator Application from Development

1. Aim

To migrate, publish, and deploy the **Student Admission Enquiry Management** application from the Development Environment to the Production Environment using Zoho Creator Environments and deployment tools, while confirming access to admission forms and reports.

2. Objective

• Understand the distinction between Development, Stage, and Production environments.

• Use Zoho Creator Environments to manage application versions and deployment.

• Review forms, reports, pages, workflows, user permissions, and external connections before release.

• Verify that the production version of the Student Admission Enquiry Management application is accessible.

3. Prerequisites and Tools Required

• Zoho Creator account with permission to manage application deployments.

• Student Admission Enquiry Management application with Admission_Enquiry_Form, enquiry reports, and Admission_Command_Center_Page.

• Zoho Creator Environments workspace and an available Production environment.

4. Step-by-Step Implementation Procedure

Step 1: Pre-Deployment Verification and Clean-Up

• Open Student Admission Enquiry Management in Development mode.

• Check Admission_Enquiry_Form, Admission_Enquiry_Form Report, All_Enquiries_List, and Admission_Command_Center_Page.

• Review existing Deluge workflows, sample records, and user permissions; do not enable untested notifications or production integrations.

• Review script execution logs and resolve critical errors before real user access.

Step 2: Access the Environments Workspace

• Return to Zoho Creator Home.

• From the left sidebar, choose Deploy > Environments.

• Add Student Admission Enquiry Management to the Environments workspace if it is not already listed.

Step 3: Review Changes and Dependencies

• Open Publish and review whether publishable changes are available from Development.

• Inspect the application forms, reports, pages, workflows, and dependencies selected for deployment.

• Check environment-specific authorization for the student_admission_crm_connection before using it in production.

Step 4: Publish and Check the Deployment

• Use the available Publish to Stage / Publish to Production options as appropriate, reviewing changes before confirmation.

• In the supplied screenshots, Zoho Creator displays version 1.0 in both Stage and Production, and reports that no further changes are available.

• Do not assume that untested workflows or CRM integrations are production-ready merely because a version is present.

Step 5: Verify Application Access

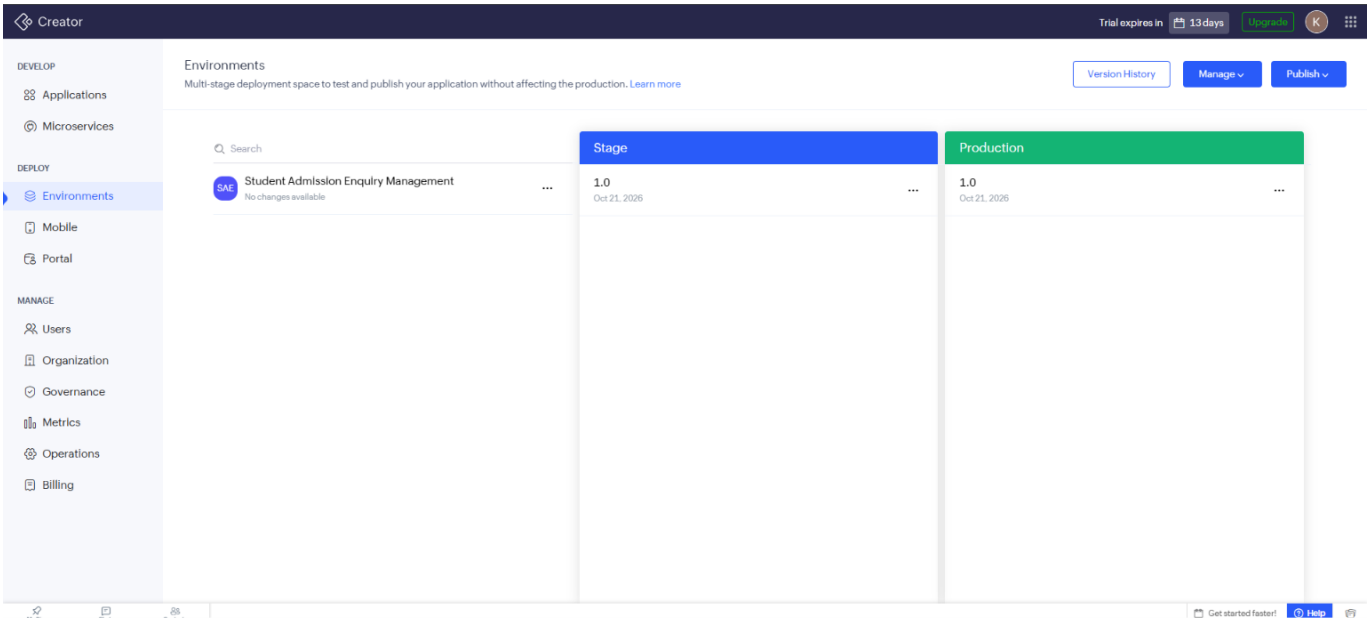

• Open the Student Admission Enquiry Management application in live mode.

• Navigate to Admission_Enquiry_Form and confirm Student Name, Date of Birth, Gender, Email Address and Contact Number fields are displayed.

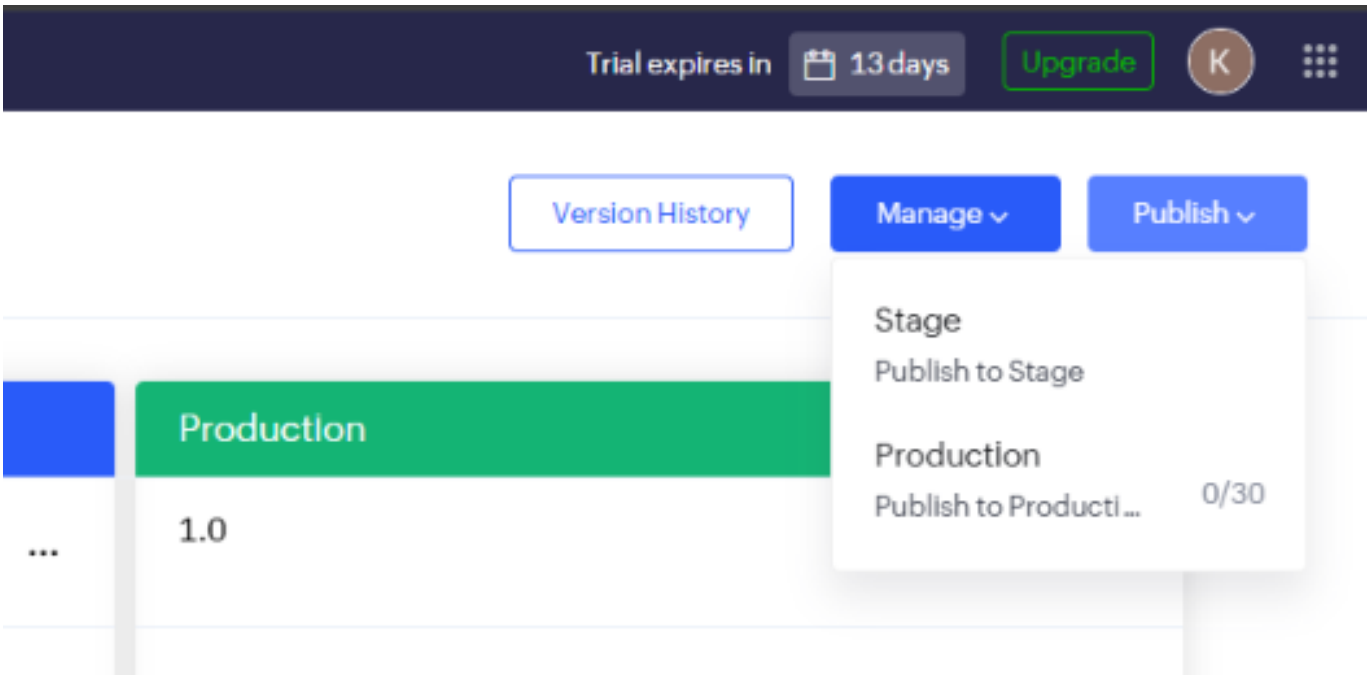

• Review role access and environment-specific integrations separately before inviting live applicants.

5. Screenshots

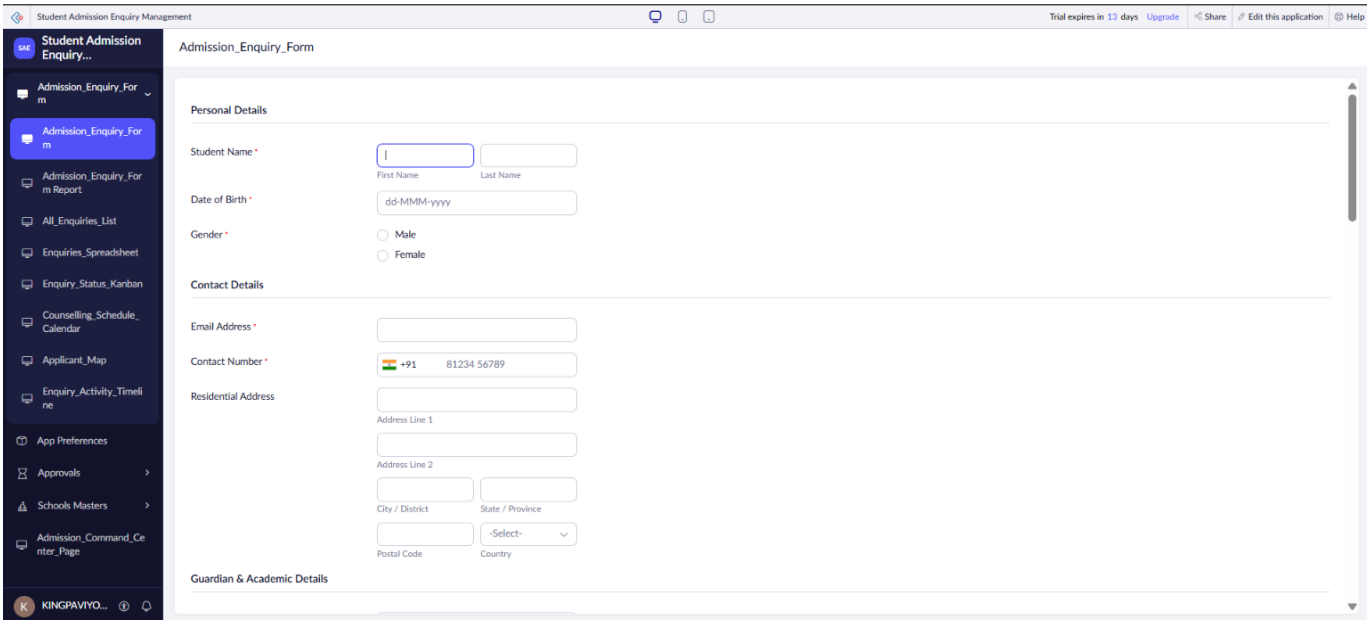

The following three screenshots were captured from the Student Admission Enquiry Management project and replace the Job Application example screenshots in the reference lab record.

Screenshot 1. Zoho Creator Environments showing Student Admission Enquiry Management, Stage version 1.0 and Production version 1.0.

Screenshot 2. Publish menu displaying Stage and Production deployment options.

Screenshot 3. Student Admission Enquiry Management application opened in live mode, showing the Admission_Enquiry_Form.

6. Result

The **Student Admission Enquiry Management** application was shown in the Zoho Creator Environments workspace with **version 1.0** listed in both Stage and Production. The admission enquiry form was also opened in live mode, demonstrating that the application interface was accessible. Final verification of role permissions, email workflows, payment operations and external CRM authorization should be performed before admitting real production users.
