Student Admission Enquiry Management
Report Types - Experiment 05a

Aim

To design and configure multiple report views in Zoho Creator for the Student Admission Enquiry Management application, enabling admission enquiries to be searched, updated, tracked by status, scheduled, mapped, and monitored over time.

Theory

Zoho Creator reports present records from a common form in different layouts suited to specific tasks. A list report helps search and filter enquiries; a spreadsheet report supports editing selected values; a Kanban report groups enquiries by stage; calendar and timeline reports organize date-based activity; and a map report displays geographic locations. Pivot, chart, and summary reports support aggregated analysis.

Reports Used Overview

Report Type	Report Name	Purpose
List View	All_Enquiries_List	Browse and filter applicants
Spreadsheet View	Enquiries_Spreadsheet	Edit verification, counselling and admission statuses
Kanban View	Enquiry_Status_Kanban	Visualize stages of the admission process
Calendar View	Counselling_Schedule_Calendar	Review scheduled counselling dates
Map View	Applicant_Map	View applicant locations geographically
Timeline View	Enquiry_Activity_Timeline	Track enquiry activity on a time axis
Pivot Table	Course_By_Gender_Pivot	Compare enquiries by course and gender
Chart View	Course_Popularity_Chart	Visualize enquiries per preferred course
Summary View	Course_Wise_Summary	Summarize counts and academic percentages per course

Procedure

1. Open the existing Student Admission Enquiry Management application in Zoho Creator and select Admission_Enquiry_Form as the data source.

2. Create All_Enquiries_List using List View. Display Student Name, Preferred Course, Gender, Class XII Percentage and Enquiry Status. Configure filters for Preferred Course, Gender and Enquiry Status.

3. Create Enquiries_Spreadsheet using Spreadsheet View. Include Student Name, Preferred Course, Document Verification Status, Counselling Status and Admission Status.

4. Create Enquiry_Status_Kanban using Kanban View and group records by enquiry status, including Enquiry Received, Document Verification, Counselling Scheduled, Admitted and Rejected.

5. Create Counselling_Schedule_Calendar using the counselling date field and verify that scheduled applicant entries appear on the appropriate days.

6. Create Applicant_Map using an applicant address field and inspect the displayed location pins.

7. Create Enquiry_Activity_Timeline using the relevant date/time field to inspect enquiry activity on a weekly timeline.

8. For the remaining assignment report types, configure Course_By_Gender_Pivot (course by gender), Course_Popularity_Chart (enquiry count per course), and Course_Wise_Summary (count and average Class XII percentage).

9. Preview the reports and confirm the layouts using submitted sample data. Capture and attach screenshots of the configured reports.

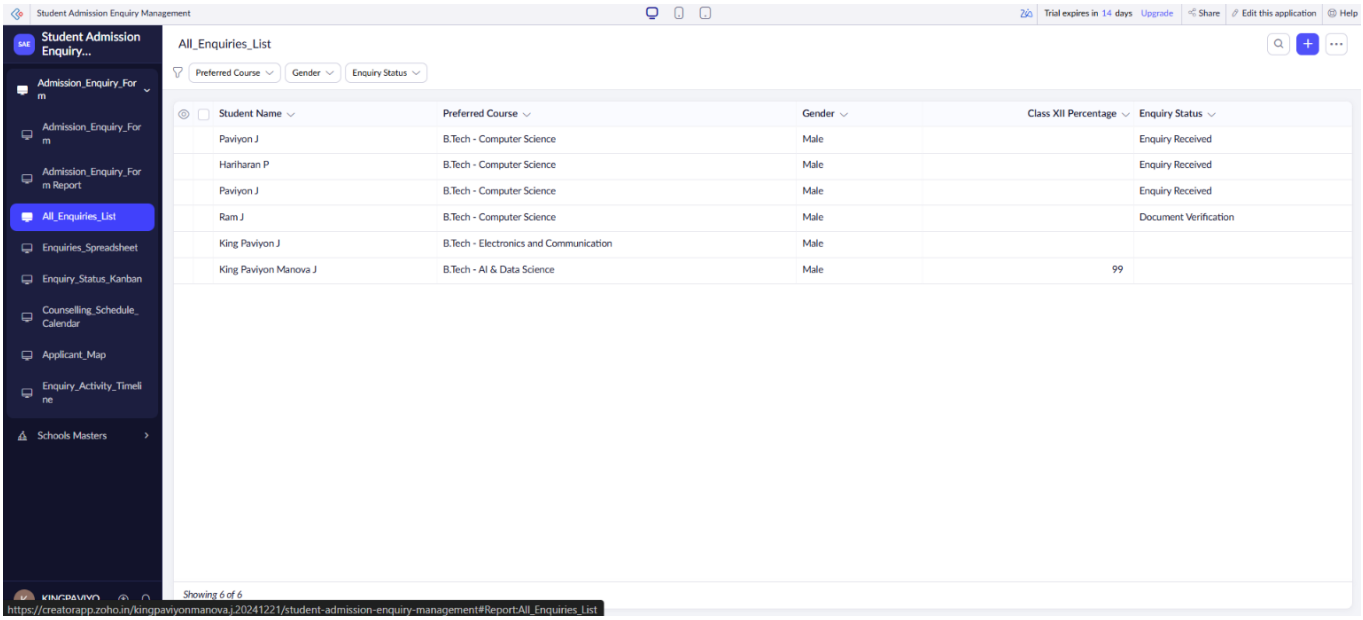

Observed Configuration

The screenshots show six populated records in the list and spreadsheet reports, a Kanban grouping with three records in Enquiry Received and one in Document Verification, a counselling calendar entry, one visible map location pin, and the activity timeline interface.

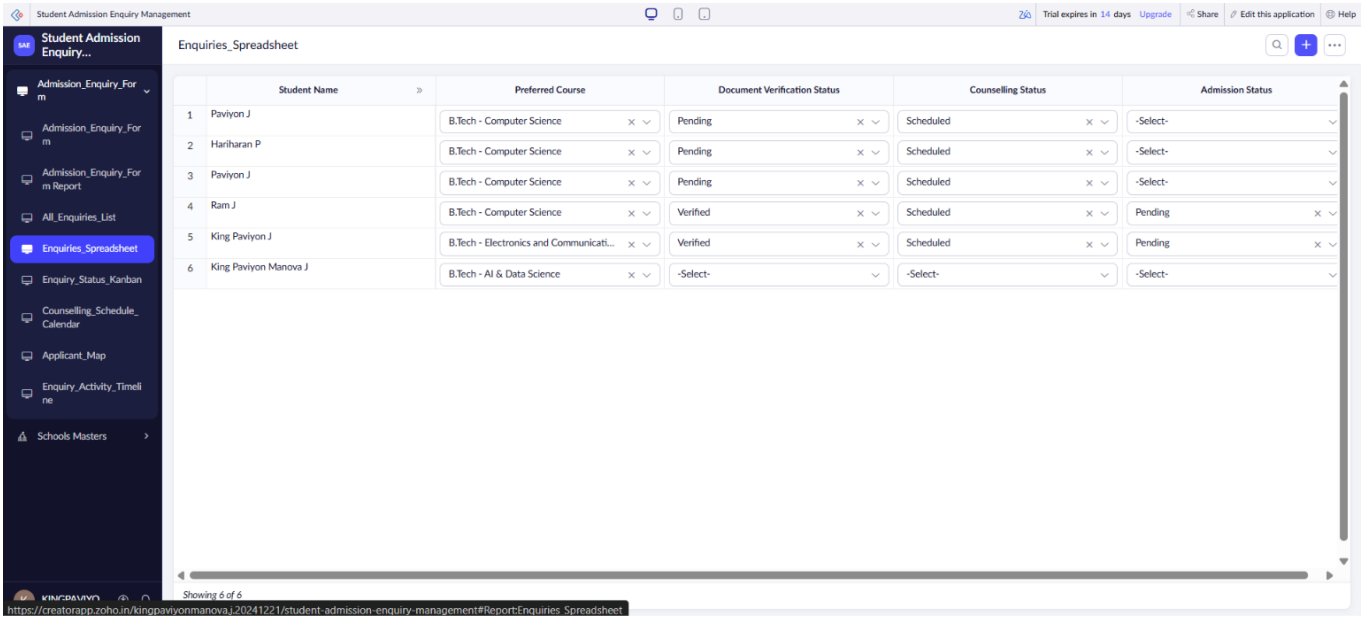

The Pivot Table, Chart View and Summary View are specified in the assignment, but corresponding screenshots were not provided. They are therefore documented as required report configurations, not as visually verified outputs.

Screenshots

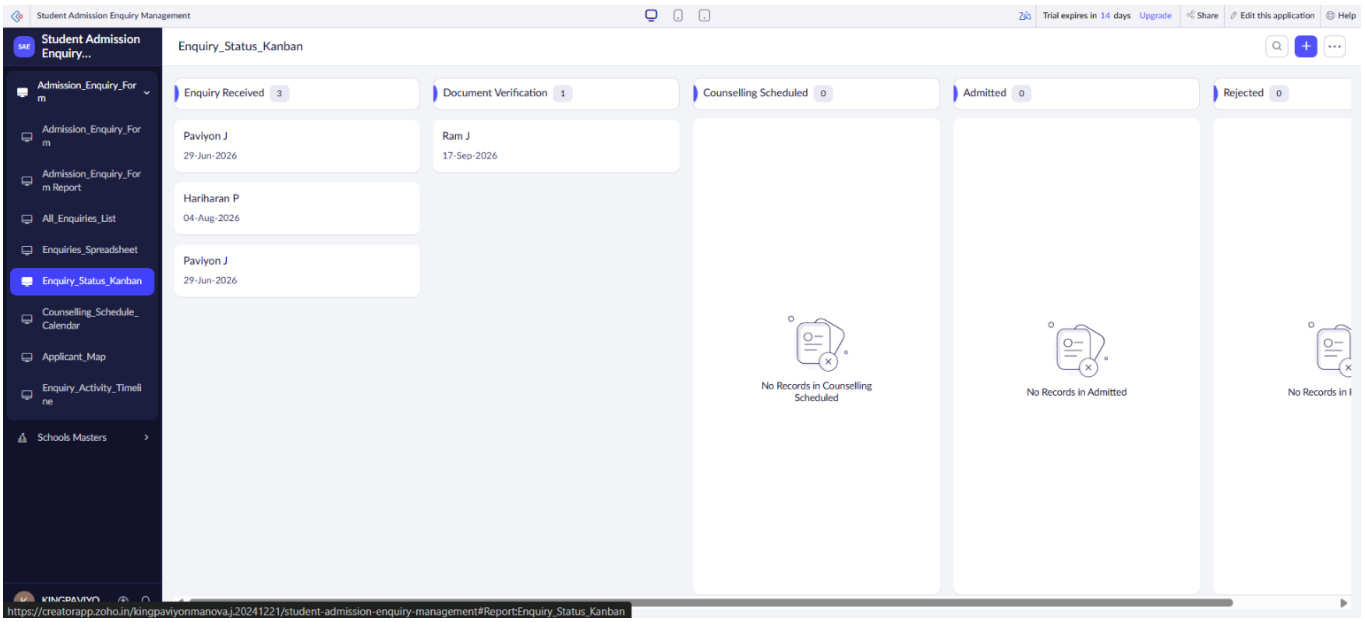

All_Enquiries_List - List View

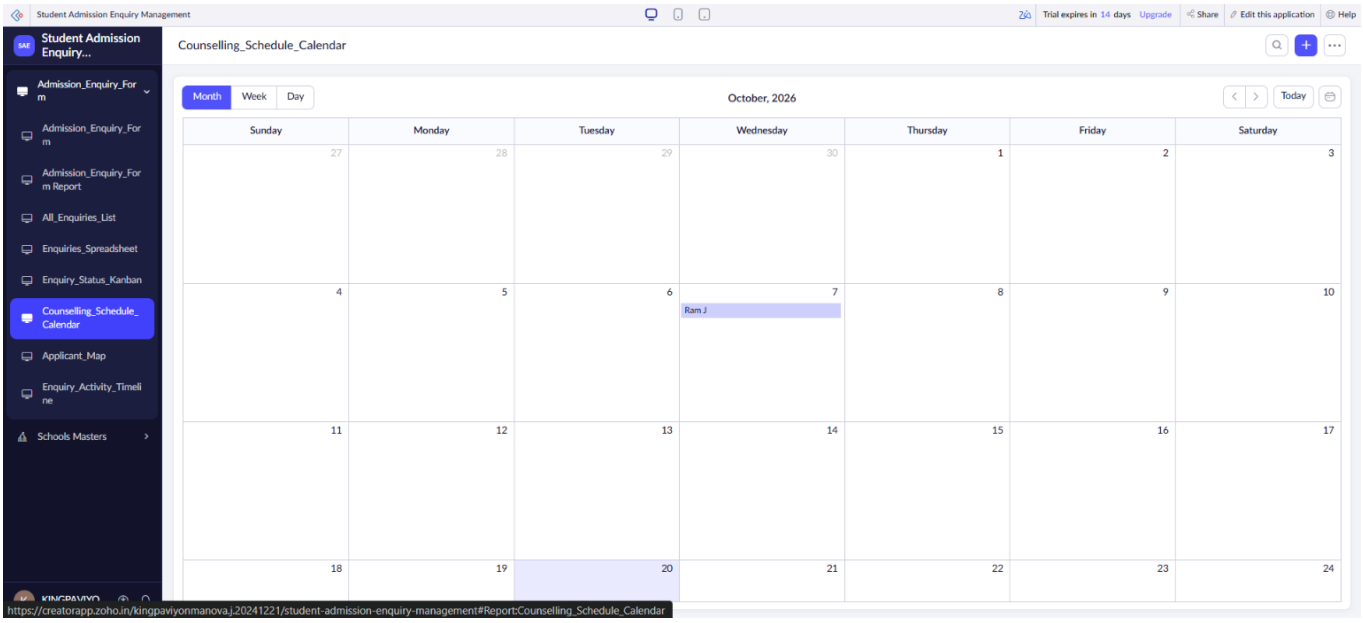

Enquiries_Spreadsheet - Spreadsheet View

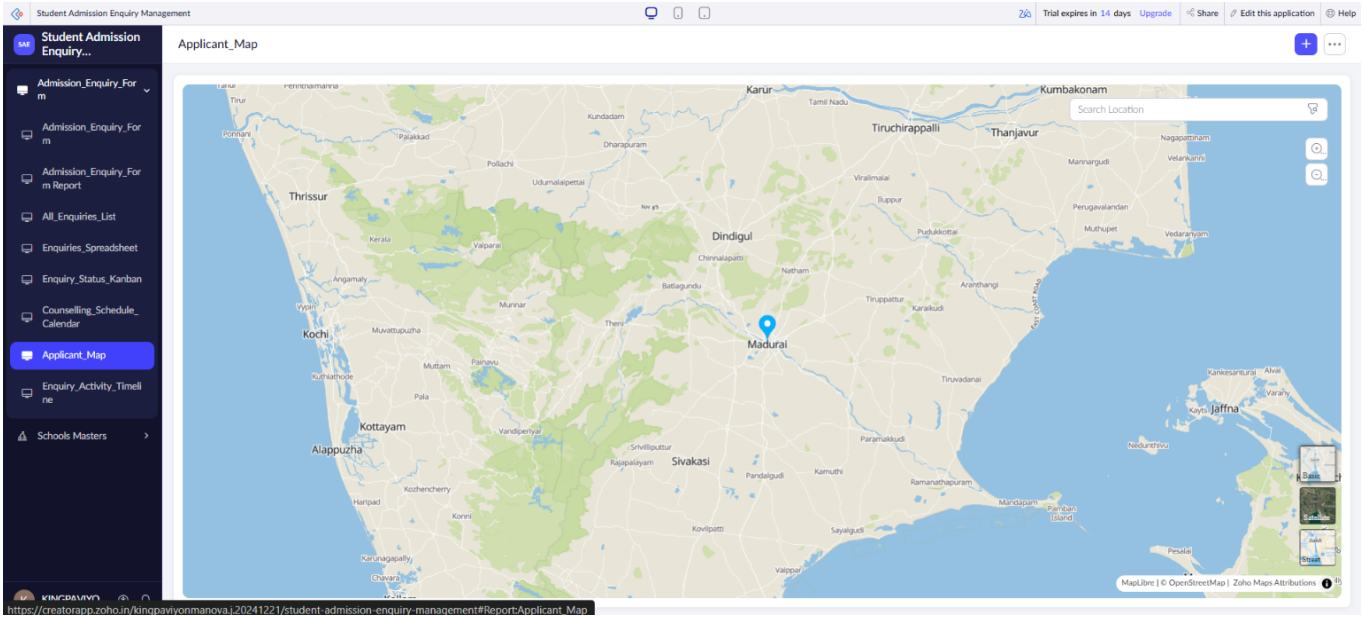

Enquiry_Status_Kanban - Kanban View

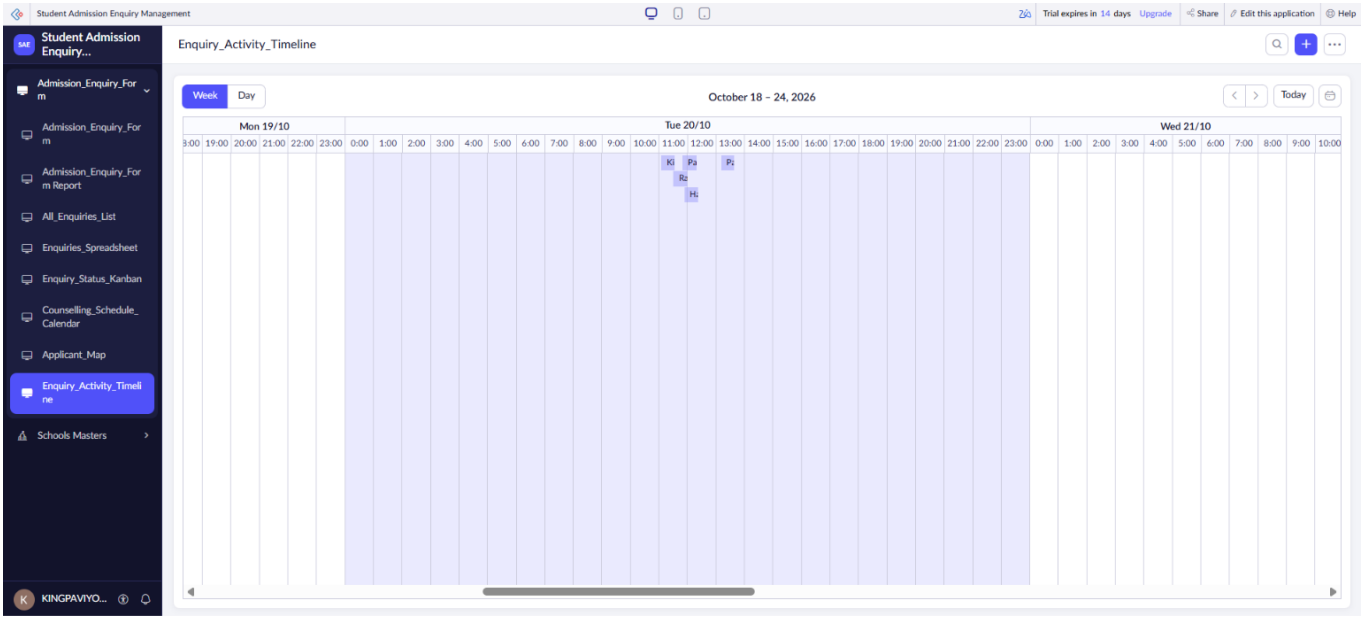

Counselling_Schedule_Calendar - Calendar View

Applicant_Map - Map View

Enquiry_Activity_Timeline - Timeline View

Remaining Report Types to Configure / Document

Course_By_Gender_Pivot (Pivot Table): Compare enquiries by course and gender.

Course_Popularity_Chart (Chart View): Visualize enquiries per preferred course.

Course_Wise_Summary (Summary View): Summarize counts and academic percentages per course.

Result

The Student Admission Enquiry Management application was documented with six configured report interfaces in Zoho Creator: List View, Spreadsheet View, Kanban View, Calendar View, Map View and Timeline View. The uploaded screenshots illustrate enquiry records, editable tracking statuses, stage grouping, counselling schedules, geographic display and activity tracking. The remaining three report types - Pivot Table, Chart View and Summary View - are included in the report specifications and require their own screenshots for full nine-report verification.
