Experiment 05b - Page Elements and Command Center

Student Admission Enquiry Management

Aim

To design an internal Admission Command Center page using Zoho Creator Page Builder, combining key enquiry statistics, course-wise visualizations, search, admission status tracking, action buttons, an enquiry report, and an embedded enquiry form in one workspace.

Theory

Zoho Creator Pages combine interactive elements such as panels, boards, charts, gauges, search inputs, forms, reports, snippets, buttons, widgets, and viewers. In an admission management application, a single command center can help staff review enquiry volume, compare interest in different courses, find students, follow application progress, and open the registration form without switching between multiple pages.

The application page is named **Admission_Command_Center_Page**. The supplied screenshots show a total admission enquiry counter, a circular gauge, a course-wise column chart, a student search bar, a counselling reminder button, an enquiry status board, a report link, and an embedded admission enquiry form.

Page Elements Used - Overview

Element	Admission command center use
Panel	Organizes the dashboard into vertical sections.
Board	Enquiry_Status_Board displays admission stages and records.
Chart	Shows enquiry counts by preferred B.Tech course.
Gauge	Displays a circular visual of total admission enquiries.
Search	Search Student Name input and Search button.
Form	Embedded Admission_Enquiry_Form for new entries.
Report	Admission_Enquiry_Form Report link for record review.
Button	Send Counselling Reminder action.
Snippets	Can display admission guidance and quick-reference text.
Widgets	Can show supplementary admission metrics.
Viewer	Can present uploaded admission documents.

Procedure

1. Open Zoho Creator and select the Student Admission Enquiry Management application.

2. Go to Design > Pages and create or open Admission_Command_Center_Page.

3. Add a main panel to organize the command center layout.

4. Insert a numerical summary showing total admission enquiries and a circular gauge.

5. Add a course-wise chart using Preferred Course as category and the count of enquiries as value.

6. Insert the Search Student Name input and the Search button.

7. Add Send Counselling Reminder as an action button.

8. Place the Enquiry_Status_Board to show enquiry and admission progression.

9. Include a link to Admission_Enquiry_Form Report and embed the Admission_Enquiry_Form.

10. Configure any additional Snippet, Widget, and Viewer elements required by the full page-elements assignment.

11. Save, preview, and verify the page components and the displayed enquiry data.

Screenshot Observations

• The overview screenshot displays **9 Total Admission Enquiries** and a column chart for four preferred courses: AI & Data Science (1), Computer Science (5), Information Technology (1), and Electronics and Communication (2).

• The second screenshot shows the search bar, Send Counselling Reminder button, Enquiry_Status_Board, report link, and embedded Personal Details portion of Admission_Enquiry_Form.

• These screenshots document the visible layout. They do not independently confirm button execution, search results, or the configuration of every remaining page element.

Screenshots

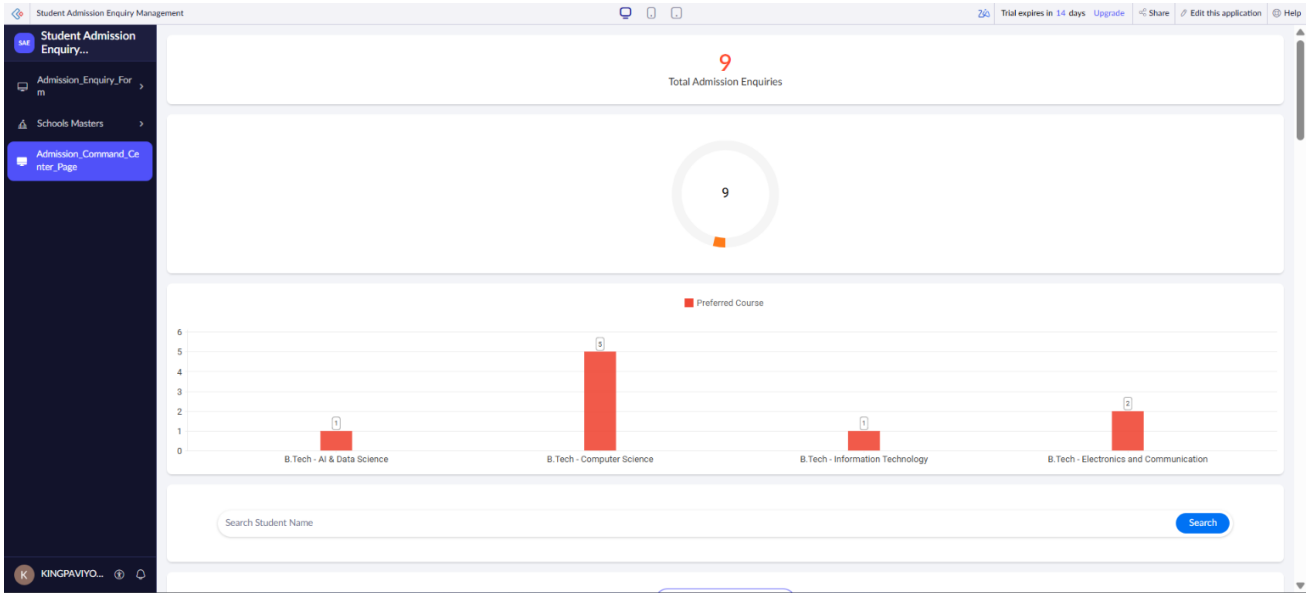

Figure 1. Admission Command Center - total enquiries, gauge, course-wise chart, and student search.

Screenshots (continued)

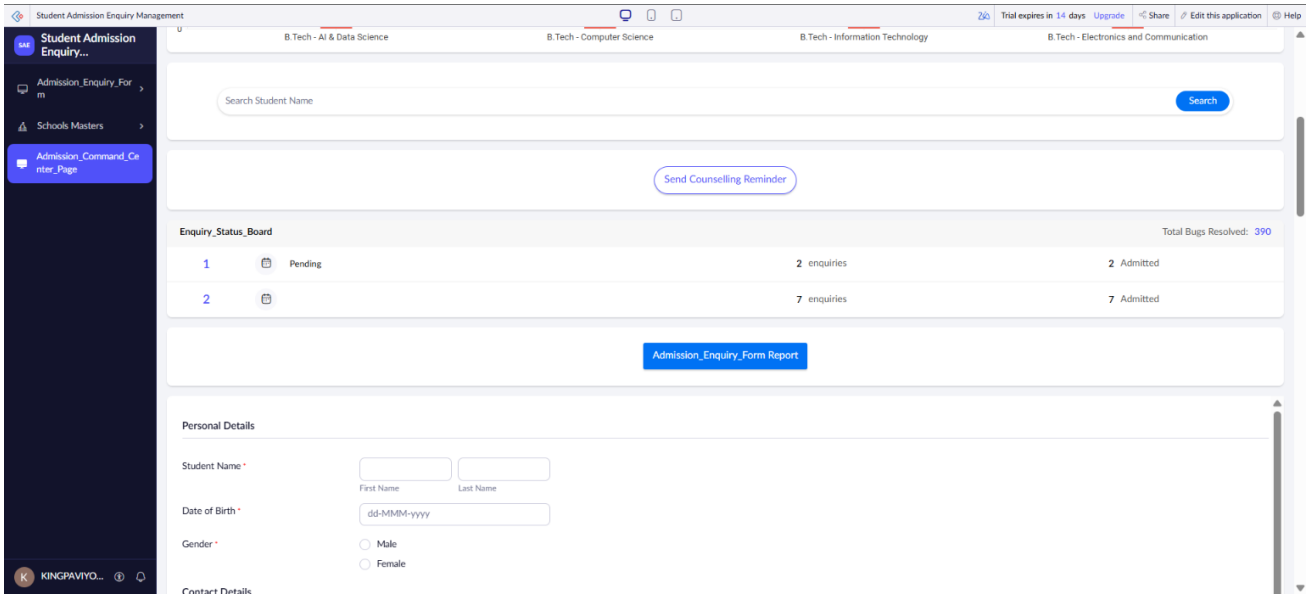

Figure 2. Admission Command Center - reminder button, status board, report access, and embedded enquiry form.

Result

The Admission_Command_Center_Page for the Student Admission Enquiry Management application was designed and previewed in Zoho Creator. The provided screenshots show dashboard metrics, a course-wise chart, student search, counselling reminder action, enquiry status board, report navigation, and an embedded enquiry form. The page provides a consolidated workspace for reviewing and managing admission enquiries. Other page-element configurations and action outcomes require separate verification.
