# Data Modelling and Form Design

# Student Admission Enquiry Management

## Aim

To design and develop a Student Admission Enquiry Management application using Zoho Creator by creating a structured admission enquiry form, applying date-of-birth validation, storing student records, and configuring a notification workflow.

## Theory

Data modelling and form design involve organizing information into suitable fields and sections for efficient collection and management. Zoho Creator is a low-code platform that provides form builders, reports, field validations and automated workflows.

In this project, the **Admission_Enquiry_Form** collects student and contact information, along with other admission enquiry details. The visible form is organized into **Personal Details** and **Contact Details**, including Student Name, Date of Birth, Gender, Email Address, Contact Number, Residential Address and Guardian Name.

Mandatory fields and a **DOB_Validation** workflow support data quality. A **Notify Applicant** workflow is configured for successful form submission. The submitted data is displayed in the **Admission_Enquiry_Form Report** for review and management. The notification action shown in the screenshot currently sends mail to **zoho.adminuserid**.

## Procedure

1. Open Zoho Creator and create the **Student Admission Enquiry Management** application.
2. Create a form named **Admission_Enquiry_Form**.
3. Add student personal details, contact fields and other required admission enquiry fields.
4. Arrange fields under appropriate sections such as **Personal Details** and **Contact Details**.
5. Mark essential fields as mandatory and configure **DOB_Validation** under form-submission validation.
6. Create the **Notify Applicant** workflow for successful form submission and configure its send-mail action.
7. Preview the application, enter a sample student enquiry and submit the form.
8. Open **Admission_Enquiry_Form Report** and verify that the submitted student record is displayed.
9. Check the Workflow section to confirm that **Notify Applicant** and **DOB_Validation** are enabled.

## Screenshots (continued):

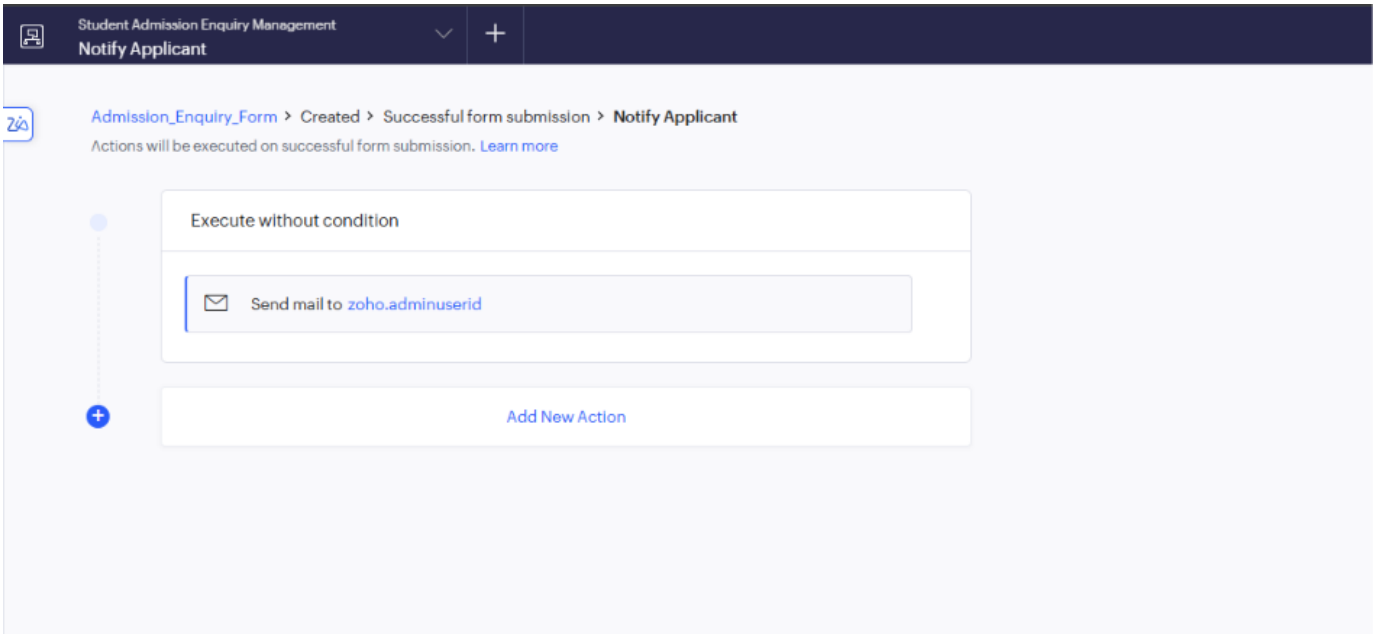

Figure 3: Notify Applicant - Send Mail Action on Successful Submission

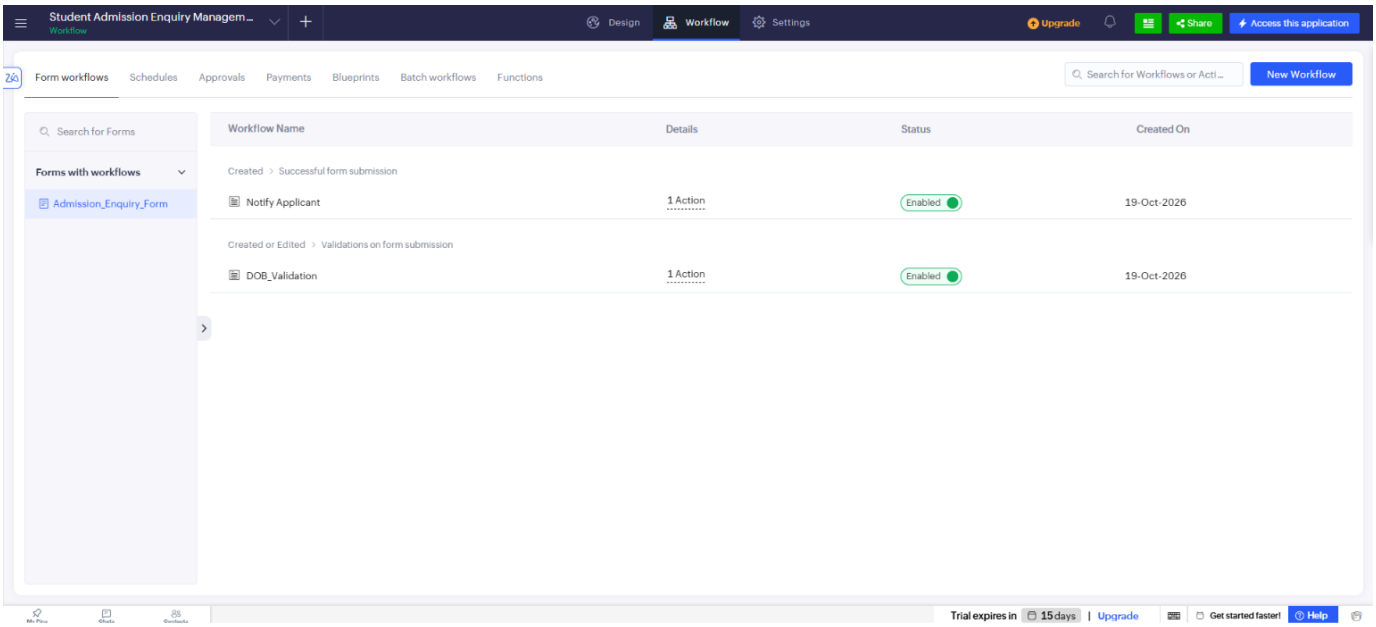

Figure 4: Enabled Workflows - Notify Applicant and DOB_Validation

## Result

The **Student Admission Enquiry Management** application was successfully created in **Zoho Creator** with an organized admission enquiry form and mandatory student details. A sample submission was successfully stored and displayed in the **Admission_Enquiry_Form Report**. The **DOB_Validation** and **Notify Applicant** workflows were configured and shown as enabled, supporting date-of-birth validation and email-action automation.
