Advanced Data Modelling and Form Design

Aim

To extend the Student Admission Enquiry Management application in Zoho Creator with advanced form fields for school verification, sibling information, supporting media, application fees, accommodation preferences, parental consent, and system-generated enquiry values.

Theory

Advanced data modelling in Zoho Creator uses lookup relationships, subforms, media and file inputs, numerical fields, computed fields, and digital signatures to capture admission details in a structured manner. The existing Admission_Enquiry_Form is extended using the four advanced sections specified in the Student Admission assignment.

Section E - School Verification & Academics: School Name Lookup (linked to Schools Masters), Student Photo (image), Marksheet Upload (file), and Entrance Exam Score (decimal).

Section F - Sibling & Media Details: Sibling Details (subform with Sibling Name, Current Class and School Name), Achievement Certificate URL, Self Introduction Video and Statement of Purpose Audio.

Section G - Fee & Accommodation Preference: Requires Hostel Accommodation (decision box), Application Fee Paid (currency), Scholarship Eligibility Percent (percent), and Net Application Fee Payable (read-only formula).

Section H - Consent & System-Generated Values: Admission Process Guidelines Display (rich text), Parent Digital Signature, Enquiry Submitted On (date-time), Admission Enquiry ID (auto number), and Admission Enquiry QR Code (QR/barcode).

Procedure

1. Open Zoho Creator and edit the existing Student Admission Enquiry Management application and Admission_Enquiry_Form.
2. Create a Schools Masters form containing the official school records for reference.
3. Add Section E: configure School Name Lookup, Student Photo, Marksheet Upload, and Entrance Exam Score.
4. Add a Sibling Details subform with columns Sibling Name, Current Class, and School Name.
5. Add Section F and include Achievement Certificate URL, Self Introduction Video and Statement of Purpose Audio.
6. Add Section G with hostel accommodation preference, application fee, scholarship eligibility and a formula-based net fee.
7. Add Section H with admission guidelines, parent digital signature, enquiry submission date and time, unique enquiry number and QR code.
8. Configure relevant required-field, format, size and numeric restrictions; save the extended form.
9. Preview the form and enter test data, including optional sibling and media details where appropriate.
10. Submit sample enquiries and open the Admission_Enquiry_Form Report to review stored records.

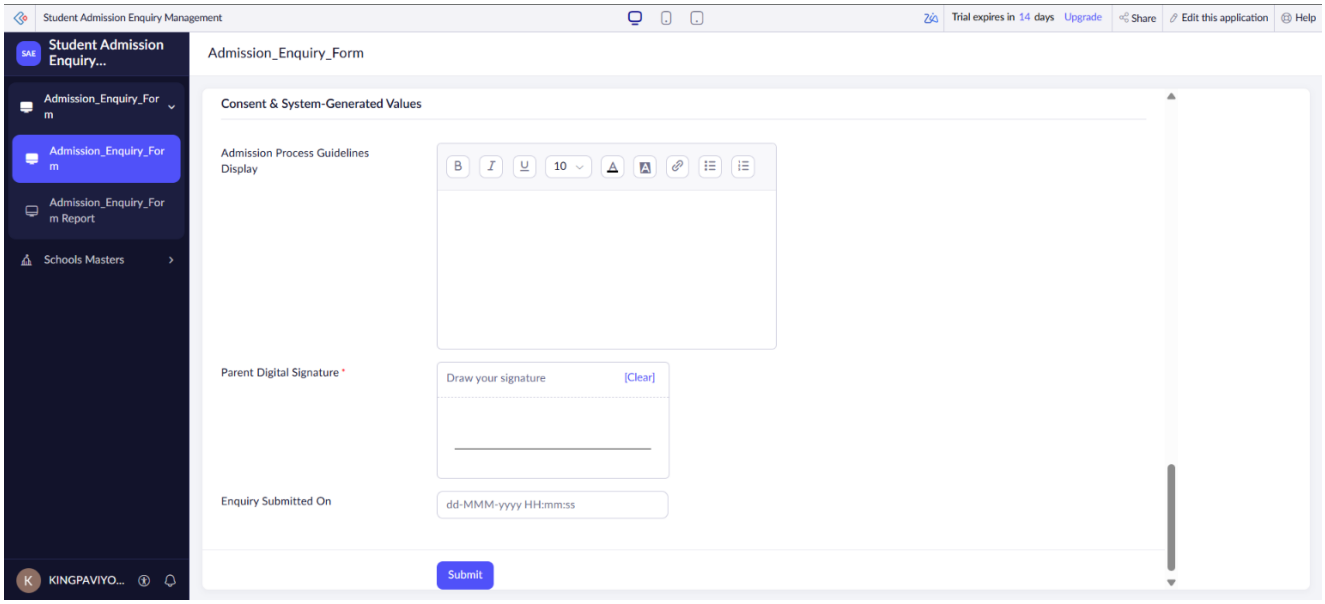

Figure 2. Admission Enquiry Form - Consent & System-Generated Values, including parent signature and enquiry timestamp.

Screenshots (continued)

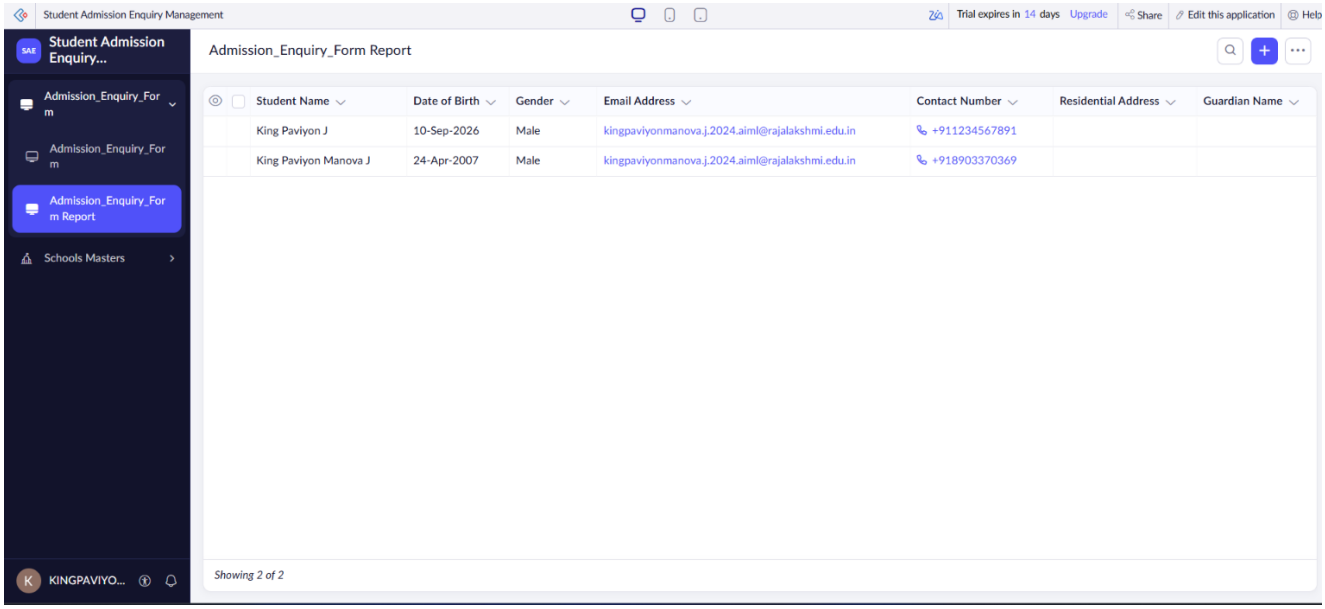

Figure 3. Admission Enquiry Form Report - two sample student enquiry records are displayed.

Result

The Student Admission Enquiry Management application was extended in Zoho Creator with advanced form sections for school verification, sibling and media details, fee and accommodation preferences, and parental consent. The supplied screenshots show the lookup and upload inputs, sibling subform, guidelines/signature area, and a report containing two student enquiry records. The assignment also specifies computed fee, auto-number and QR-code features; their final operation is not independently demonstrated in the supplied screenshots.
